

## POLICY PARTNERSHIP ON WOMEN AND THE ECONOMY

January 2022

# Healthy Women, Healthy Economies

COVID-19 AND GENDER: What's at Stake If We Don't Build Back More Inclusive and Invest in Women

## **COVID-19 AND GENDER:**

**Workforce Gap** 

A woman is almost **50% less likely** 

to be in the workforce compared to a man. [1]

#### Pav Gap

Even if a woman is in the workforce, she generally makes \$.84 to a man's \$1 for the same job. [2]

What's at Stake If We Don't Build Back More Inclusive and Invest in Women

### INDIVIDUAL-LEVEL EXPERIENCE

The pandemic is widening the gender gap, reducing women's economic potential.

#### **IMMEDIATE EFFECTS**

#### **More Unpaid Work**

A woman is spending 31 hours a week taking care of children, compared to 26 hours before - a 20% increase. [3]

#### **Fewer Jobs**

A woman is more likely to lose her job and still be unemployed. Men have largely regained their lost jobs. In 2020, women were nearly **30% more likely** to lose their job than men. [4]

### FLOW-ON EFFECTS

#### **Less Money Saved**

A woman is financially less secure. COVID-19 cost women at least \$800 billion in lost income in 2020, the size of Thailand and Viet Nam's GDP combined. [4]

A woman is more likely to generate a lifetime of lower savings and retire into poverty. [5] In the U.S., only **40%** of women planning to retire say they are saving for retirement, versus 58% of men. [6]

#### **Fewer Job Skills**

A woman is more likely to lose out on the "jobs of tomorrow". Women are more likely than men to drop out of the workforce, therefore missing out on digital transformation. Only two of the eight "jobs of tomorrow" have reached gender parity. [7]

#### **OTHER EFFECTS**

### Less Access to Family Planning

A woman will have less access to contraceptives as government budgets for sexual and reproductive health services are diverted to combat the pandemic.

In the United States, a woman is **33% less likely** to have access to contraceptives. [8]

Together, these effects could impact a woman's family planning decisions.

Depending on a woman's situation, she may have...

#### **Fewer Pregnancies**

A woman may hold off having children. During the pandemic, more than 40% of women in the U.S. changed their plans about when to have children or how many children to have, influenced by the pandemic's economic effects. [8]

#### **More Pregnancies**

A woman may have unintended pregnancies.

21 million women in Southeast Asia have an unmet need for modern contraception. [9]

**RESULT** 

WOMEN

HAVE...

## **COVID-19 AND GENDER:**

**Workforce Gap** 

Closing the gender workforce gap could increase GDP by **35%** in economies where the gaps are largest. [10]

Pay Gap

Globally, economies would yield a \$172 trillion dollar dividend by closing the gender gap. [11]

What's at Stake If We Don't Build Back More Inclusive and Invest in Women

### **ECONOMY-LEVEL EXPERIENCE**

The pandemic is widening the gender gap, reducing economies' economic potential.

**IMMEDIATE EFFECTS** 

#### **More Unpaid Work**

Unpaid work decreases women's ability to participate in the economy [12, 13], which leads to reduced economic output.

#### **Fewer Jobs**

Economies are losing GDP growth.
Women's higher job loss compared to men
could cost **\$1 trillion** in global GDP
growth by 2030. [14]

**FLOW-ON EFFECTS** 

#### **Less Resources for Economies**

Economies have less resources for pensions, social security schemes, and tax revenue. [15]

These economic costs are not yet known.

## Fewer Digitally Skilled Workers

Women who leave the workforce and want to re-enter need re-skilling for the "jobs of tomorrow." [16]
Sex-disaggregated data tracking the impact of the pandemic on the widening of the gender digital divide is not currently available. This data needs to be collected to implement (and track the efficacy of) policies seeking to close the divide.

**OTHER EFFECTS** 

### More Unmet Family Planning Needs

Economies have less resources to spend on family planning services during crises as government budgets for sexual and reproductive health services are diverted to combat the pandemic.

During the Ebola epidemic distribution of family planning declined by as much as **65%** in some economies [17]

Together, these effects could impact women's family planning decisions, which could lead to...

#### **More Debt**

Economies may see a decline in births. This could harm the fiscal balances of economies with ageing populations.

A **1% rise** in the aging and aged population corresponds to a **5%-9% increase** in gross debt. [18]

## More Economic Costs Due to Unintended Pregnancies

Economies may see a rise in births. If this rise is largely attributed to unintended pregnancies, then research shows there are associated economic costs.

unintended) in Latin American economies cost on average **\$1.2 billion** a year in lost earnings by mothers, lost tax revenue, and increased health care costs. [19]

Teen pregnancies (often

### **How to Build Back More Inclusive and Invest in Women**

The APEC Healthy Women, Healthy Economies Policy Toolkit presents a menu of gender-specific policy options that economies may draw from to pilot, implement and scale up on a voluntary basis, choosing the actions appropriate for their economies. Below are examples of the options, categorized into 5 issues areas:

## oolicy ng the s areas:

Work health and safety

Work Life balance

Sexual and reproductive health

Gender-based violence

## Workplace Health and Safety

**Strengthening** the gender sensitivity of economy-level labor and safety and health laws and their application.

**Developing** appropriate guidance to manage risks related to pregnant and lactating women.

**Training** health care providers in early detection and diagnosis of workplace injury and illness more prevalent among women.

## Health Awareness and Access

Identifying and using domestic and international data sets to determine health risks more prevalent among women. Identify sexspecific gaps in data sets.

**Integrating** awareness of lifestyle-disease risk factors into government health communication strategies.

Developing and strengthening targeted mechanisms and programs to ensure vulnerable women can gain awareness of and access to health services based on each member economy's local legislation(s).

## Sexual & Reproductive Health

Assessing barriers to women's access to health services and developing a comprehensive plan to address the barriers.

**Reducing** financial barriers that prevent women from accessing services and supplies.

**Strengthening** health care worker training, including training on providing high-quality, nondiscriminatory services and supportive supervision.

#### **Gender-Based Violence**

Developing, implementing, and monitoring clearly defined anti-sexual harassment legislation.

Instituting regular training for workers, inspectors, union leaders, workplace safety officers, and HR personnel on gender discrimination and sexual harassment.

Developing, implementing, and monitoring support mechanisms to address sexual harassment in the workplace.

#### Work/Life Balance

**Ensuring** that women returning from maternity leave can return to the same job level; prohibiting termination of employment because of pregnancy.

**Establishing or strengthening** sick and paid time off policies and ensure that they are applied consistently regardless of gender, sector, part or fulltime status, or age group.

Generating and collecting data that will inform policymakers and employers about the economic impact of more supportive family care policies.
