|   | <b>Speaker</b>                  |      |
|---|---------------------------------|------|
| <b>Opening Speech</b>   | <b>Prof. Ir. Said D. Jenie</b>  |      |
| <b>Welcome Speech</b>   | <b>Dr. Indroyono Soesilo</b>    |      |
| <br>  |                                 |      |
| <b>Session A: Monitoring of coastal ecosystem</b>   |                                 |      |
| Mapping of inland and underwater habitats with satellite images   | <b>Dr. Nguyen P. Khu</b>        | 1-1  |
| Reef Connectivity: a Study of Larval Dispersal in Sulu Sea  | <b>Prof. Cesar Villanoy</b>     | 2-1  |
| Mapping of coastal ecosystem condition around Thousand Island of North Jakarta  | <b>Mr. Yudi Wahyudi</b>         | 3-1  |
| A remote sensing investigation on river discharges and their influences to marine environmental changes over Jakarta Bay    | <b>Dr. Nani Hendiarti</b>       | 4-1  |
| Application of ocean color remote sensing for monitoring and mapping total suspended matter: a case study in East China Sea | <b>Dr. Eko Siswanto</b>         | 5-1  |
| <br>  |                                 |      |
| <b>Session B: Hyperspectral mapping on natural resources</b>  |                                 |      |
| Coastal water monitoring and algorithm development for hyperspectrum sensor   | <b>Prof. Ichio Asanuma</b>      | 6-1  |
| Development of mangrove spectral library  | <b>Mr. Hartanto Sanjaya</b>     | 7-1  |
| Land Cover Classification of Fordata Island with Hyperspectral Data   | <b>Ms. Marina Frederik</b>      | 8-1  |
| Observation of SST and chlorophyll-a concentration in Coastal Sea of Vietnam using ocean color remote sensing               | <b>Dr. Nguyen Phi Khu</b>       | 9-1  |
| <br>  |                                 |      |
| <b>Session C: Mapping &amp; mitigation of marine pollution</b>  |                                 |      |
| A Multi-scale detection technique for anomaly on ocean surface using optical satellite images                               | <b>Prof. L.Y. Chang</b>         | 10-1 |
| Simulation of spilled oil in Seribu Islands waters  | <b>Prof. Safwan Hadi</b>        | 11-1 |
| <br>  |                                 |      |
| <b>Session D: Field verification on coastal ecosystem mapping</b>   |                                 |      |
| Identification of groundtruthing needs for the extended use of satellite imagery in nearshore habitat mapping               | <b>Dr. Karen von Juterzenka</b> | 12-1 |
| Formosat-2 satellite imagery assessment for coastal ecosystem mapping in western coast of Banten , Indonesia                | <b>Mr. Syamsul B. Agus</b>      | 13-1 |

|  |                              |      |
|--|------------------------------|------|
| Integration of satellite application and computational tool for marine conservation area planning  | <b>Mr. Elvan Ampou</b>       | 14-1 |
| <b>Session E: Operational oceanography</b>   |                              |      |
| Satellite monitoring of fishing vessels as a tool to localize and estimate the fishing activity  | <b>Dr. Philippe Gaspar</b>   | 15-1 |
| A conceptual design of operational oceanography in the Eastern Indian Ocean  | <b>Dr. Fadli Syamsudin</b>   | 16-1 |
| The Operational Oceanographic Observation  | <b>Prof. Chia Chuen Kao</b>  | 17-1 |
| A Typhoon Swell Freak Wave Hindcast Example  | <b>Dr. Nai Kuang Liang</b>   | 18-1 |
| Monitoring of Marine Resources in Indonesia's Small Outer Islands (Case: Manterawu Island, North Sulawesi)   | <b>Mr. Dendy Mahabrur</b>    | 19-1 |
| <b>Session F: Marine energy assessment</b>   |                              |      |
| Renewable ocean energy for the APEC region   | <b>Prof. Nai Kuang Liang</b> | 20-1 |
| The Energy From Taiwan Current   | <b>Prof. Cho-Teng Liu</b>    | 21-1 |
| <b>Session G: Fishery and mariculture</b>  |                              |      |
| Coupling 3-D models of ocean physics and biogeochemistry to fish population dynamics models to monitor marine living resources in a context of global change | <b>Dr. Philippe Gaspar</b>   | 22-1 |
| Application of Knowledge-Based Expert System Model for Fishing Ground Prediction in the Tropical Area  | <b>Dr. Muhamad Sadly</b>     | 23-1 |
| Vulnerability of reef resources to the mariculture industry: a remote sensing and modeling exercise  | <b>Ms. Salamante</b>         | 24-1 |
| Understanding the abundance of pelagic fish in Bali Strait during southeast monsoon  | <b>Mr. Teja Arief</b>        | 25-1 |
| Remote Sensing Application For Fisheries   | <b>Dr. Aryo Hanggono</b>     | 26-1 |
| <b>Appendix I : Agenda of SAKE-2</b>   |                              | A1-1 |
| <b>Appendix II : Summary of Panel Discussion</b>   |                              | A2-1 |
